- **Finalized project Board**
  - Added tasks, and a category for new tasks which will be done by the next sprint.
- **Finalized Scope**
  - Finalized our scope, addressed all miscommunication we had from our lab last Thursday: (4/6)
    - Final Scope is going to include the implementation of both books and class notes.
      - Each will be categorized by genre and classes.
        - For example, the books will be categorized by genre
        - The class notes will be organized by courses and by the teacher.
    - Will also include the annotation feature for both the books and the classes
    - Decided that since the API only has the metadata for the books, we will have a database for the texts of the books themselves.
  - **Use Case Diagram**
    - Confirmed how we will implement our use case diagram, and how the user will interact with our website/app.
- **Directory Structure**
  - Decided on a simple directory structure to implement our code
    - We have the partials and the views
- **What are we going to do this week:**
  - Decided that we are going to try to finish most of the HTML/CSS outline for our app.
    - Therefore, next week we will be able to implement either the database or the backend.
    - Or both!
  - Going to split up the HTML work by feature, and the branches will be made by feature worked on.
